

Artificial Intelligence (AI)

Exploring AI Tools Like  ChatGPT

Sending Office: House Digital Service
Sent By: HouseDigitalService@mail.house.gov
Date: April 6, 2023

Artificial intelligence (AI) tools like ChatGPT and the new Bing search engine are the future – and the House Digital Service team is making it easier for offices to understand and explore AI at the House.

What AI Means for the House

AI tools can be used for a variety of office administrative and operational purposes, including:

- Generating constituent response drafts and press documents;
- Summarizing large amounts of text in speeches;
- Drafting policy papers or even bills;
- Creating new logos or graphical elements for branded office resources;
- And more.

How Your Office Can Leverage AI

Our new working group is open to any office interested in using AI tools like ChatGPT and other related cloud services.

Your office's participation will be anonymous (due to the sensitivities of using AI tools in a public office) and you'll be given paid licenses to use the premium versions of these tools.

Just like with any working group, we'll ask you to share your usage information – so that we can later share our findings on the effectiveness of these tools with the larger House community.

Please note: *ChatGPT and other similar new tools are **currently not approved** for House use under HISPOL17, but they are under review.*

As an AI Working Group member, you'll be a part of this review process.

AI Pros vs. Cons

AI tools are rapidly adopted across the globe, including here in the U.S. Congress.

- ✓ **IDEAL FOR**
- Letters
 - Summaries
 - Press Release

- ✗ **CONCERNS**
- Bias
 - Lack of Accuracy
 - Security Concerns
